MERCIAN WEALTH AUTOMATION | SYSTEMS FOR ACCOUNTANTS

How we work with accounting practices

A free website review, a 15-minute walkthrough, and what happens next.

1. What we check in your free website review

We look at your public website on a phone, the way a new client would. It takes about five minutes.

1 **Speed**
Does the first screen load quickly on mobile data?

2 **Mobile layout**
Do text, buttons and forms fit the screen?

3 **Clarity**
Can a visitor tell who you serve, what you do and where, in five seconds?

4 **Next step**
Is there a clear tap-to-call, WhatsApp or booking option on the homepage?

5 **Response promise**
Do visitors know when to expect a reply, and get a confirmation after enquiring?

6 **Trust signals**
Regulatory body, AML supervisor, company details, reviews and named people.

7 **Findability**
FAQs, separate service pages and a complete Google Business Profile.

8 **Making Tax Digital**
Is MTD for Income Tax explained clearly for your clients?

2. How it starts

STEP 1
Walkthrough
A 15-minute call. We share what we found on your site and ask how your practice works.

STEP 2
We analyse
We work out what your practice needs and what is realistic.

STEP 3
Scope and price
Before anything moves forward, we come back with a clear scope and price. Nothing is quoted before then.

STEP 4
Staged build
Agreed in writing and delivered in stages. Your team approves everything that goes out.

3. To get the most from the call

It helps to have a rough idea of these before we speak. Estimates are fine.

- Roughly how many new enquiries do you get each month, and where do they come from?
- How quickly do you usually reply, including evenings and weekends?
- What does a typical client pay you per year, and how long do they stay?
- What single day-to-day bottleneck would you most like to remove for your team?

4. How we work

Your team approves
everything that goes out

No ledger access
we don't need your client financial data

Built with UK GDPR
in mind from the start

Works with your tools
Xero, Dext, IRIS and more

This review is based only on what a visitor can see on your public website.
